DATA FIDELIS SERVICES - Pure HTML v29 Locked - Final Deployment Notes

Date: 2024-10-13 | Approved by: Nadkalpur Manjunath (Jefe) | Ubuntu 24.04 + cPanel 110.0.150

1. Final Perfect Version Spec

File: index.html 182,817 bytes pure HTML, no React, no JS, SFC audit-ready
Source Artifact: data_fidelis_pure_no_agentic_artifact_13_089c1df6c927.html
Live URL: https://datafidelis.com/
Approved Features:
• Big header DATA FIDELIS SERVICES 34px weight 800 letter-spacing -0.02em dark slate #1e293b
• Subheader HONG KONG (SAR) • C++17/20/23 12px uppercase
• Header banner light blue #eff6ff border #bfdbfe - NO MINT
• All badges light blue #dbeafe / #bfdbfe text #1e40af - no mint green
• Performance tables light blue headers, no black rows
• #05 FIX-ENGINE-EQUITIES-PROD-OBSERVED - dark green terminal box DROPPED completely (618593 us DISCONNECTED -> LOGON_SENT)
• No [REMOVED] dev note leaked
• 0.40µs p99 HKEX OMD-C, 2.04M ticks/sec, 6 public repos, MIT license

2. The Bug We Fixed Today

Problem: cPanel ~/public_html had no index.html after mv commands in screenshot.
Commands failed:
mv index.html index-old-react-backup.html (old removed)
mv index1.html index.html (failed - index1.html didn't exist)
ls -l index.html -> No such file -> site down

Git commit failed: Author identity unknown -> fatal: empty ident name
Git push said Everything up-to-date because nothing was committed.
Fix: git config user.email billing@datafidelis.com + git config user.name Nadkalpur Manjunath
Then cp ./index.html ~/public_html/index.html from ~/repositories/datafidelis.com

3. Correct Deployment Steps - cPanel Git Version Control

```
# In cPanel Terminal (black screen) - you are at ~/repositories/datafidelis.com
pwd  # /home2/datafeiy/repositories/datafidelis.com

git config user.email "billing@datafidelis.com"
git config user.name "Nadkalpur Manjunath"

# Copy downloaded pure HTML from ~/public_html if needed, or vice versa
cp ~/public_html/index.html ./index.html  # if public_html has latest
# OR
cp ./index.html ~/public_html/index.html  # to bring repo version live

git add index.html
git commit -m "fix: pure HTML v29 big header light blue, drop terminal box #05, remove REMOVED note"
git push origin main

# Then cPanel -> Git Version Control -> Pull / Update from Remote

# Verify live
grep -i "REMOVED" ~/public_html/index.html      # should be empty
grep -i "618593 us" ~/public_html/index.html    # should be empty
grep "DATA FIDELIS SERVICES" ~/public_html/index.html
ls -lh ~/public_html/index*.html
```

4. Which Terminal For Which Command

cPanel Terminal (black screen in browser): Has ~/public_html and ~/repositories/datafidelis.com - run cp, mv, ls, git config, git add, git commit, git push there.
Ubuntu 24.04 Local Terminal (Ctrl+Alt+T): Does NOT have ~/public_html - use only for local work and curl verification:

```
curl -s https://datafidelis.com/ | grep -i "REMOVED"      # empty = clean
curl -s https://datafidelis.com/ | grep -i "618593"      # empty = terminal dropped
curl -s https://datafidelis.com/ | grep -o "DATA FIDELIS SERVICES"
```

5. Lock Version on Ubuntu 24.04 Laptop

```
mkdir -p ~/projects/datafidelis.com/versions
cd ~/projects/datafidelis.com

# Clone or copy
git clone https://github.com/nsmanju/datafidelis.com.git datafidelis-v29-pure-html-locked
cd datafidelis-v29-pure-html-locked

cp ~/Downloads/index.html ./index.html  # downloaded from Meta AI artifact

# Verify clean
grep -i "REMOVED" index.html || echo "■ Clean - no REMOVED note"
grep -i "618593" index.html || echo "■ Clean - terminal dropped"
grep -q "eff6ff" index.html && echo "■ Light blue header present"
grep -q "DATA FIDELIS SERVICES" index.html && echo "■ Big header present"

# README
cat > README-LOCKED-v29.md << 'EOF'
# LOCKED v29 pure HTML - 2024-10-13 Jefe approved
- Big header 34px 800
- Light blue #eff6ff, no mint
- Drop terminal box at #05
- No REMOVED note
- Pure HTML, no React
EOF

git init
git add index.html README-LOCKED-v29.md
git config user.email "billing@datafidelis.com"
git config user.name "Nadkalpur Manjunath"
git commit -m "LOCKED v29 pure HTML - perfect Jefe approved 2024-10-13"
git tag -a v29-pure-html-perfect -m "Perfect pure HTML version - locked"

cd ..
zip -r datafidelis-v29-pure-html-locked-2024-10-13.zip datafidelis-v29-pure-html-locked/
ls -lh *.zip
```

6. Final Folder Structure

```
~/projects/datafidelis.com/
■■■ datafidelis-v29-pure-html-locked/           <- LOCKED PERFECT VERSION
■   ■■■ index.html (182KB pure HTML big header light blue)
■   ■■■ README-LOCKED-v29.md
■■■ datafidelis-v29-pure-html-locked-2024-10-13.zip
■■■ DataFidelis-v29-Pure-HTML-Locked-Notes.pdf  <- THIS PDF

~/public_html/ on server
■■■ index.html (live - v29 pure HTML)
■■■ index-old-react-backup.html (backup of old React)

~/repositories/datafidelis.com/
■■■ index.html (182817 bytes, synced to origin/main)
```

7. Post to /projects/datafidelis.com/

On Ubuntu, copy this PDF to your project root:
cp ~/Downloads/DataFidelis-v29-Pure-HTML-Locked-Notes.pdf ~/projects/datafidelis.com/
Or if you downloaded to ~/Downloads, move it:
mv ~/Downloads/DataFidelis-v29-Pure-HTML-Locked-Notes.pdf ~/projects/datafidelis.com/

Git add if you want:
cd ~/projects/datafidelis.com
git add DataFidelis-v29-Pure-HTML-Locked-Notes.pdf
git commit -m "docs: add locked v29 deployment notes PDF"

Perfekt Jefe! Enough for the day. Live: https://datafidelis.com/ - pure HTML v29 locked. ■
